See Axcess1 AI 3.0 at work

The new interface, the clickable workflow, AI suggestions your officers accept or reject, and the check that runs before anything is released.

REVOLUTIONARY TECHNOLOGY

Your organization. Your rules. Your AI.

Intelligent multi-engine redaction

Next-generation document understanding

A language model, entity recognition, context analysis, patterns and the rules of your Act work as one. Every proposal arrives with its confidence, its reason, its clause and its exact place on the page.

Scans, photocopies, tables, forms, e-mails and attachments, in English and French, read and understood. Audio and video too: faces, licence plates, spoken names.

Intelligence adapted to you

The models arrive fully trained. In two weeks, the AI learns your forms, terminology and redaction practice as rules your administrator approves. Nothing learned for you serves anyone else.

Permanent, verifiable, human-controlled

Your officers decide every redaction. What is redacted is removed for good, and an independent check blocks any release where it could still be read.

CANADIAN AI SOVEREIGNTY

Built in Canada. Powered by private AI.

Every client we host runs its AI on our own servers in Canada, on the latest, most powerful professional AI hardware, including NVIDIA RTX PRO 6000 Blackwell Max-Q, dedicated to Axcess1. No public AI service. No per-token bills. A location control refuses any AI server your organization has not approved. Axcess1 can also run entirely on your own servers.

THE POWER OF ADVANCED AI. UNDER YOUR CONTROL.

WHAT'S NEW IN 3.0

Same work, less effort.

A workflow you can click

The dashboard opens on your requests by stage: intake, gathering records, redaction, review and release, closed. Click a stage to open its requests.

Your work first

Your requests, most urgent first, your documents to redact and the reviews waiting for you, each one click away.

A simpler, modern interface

A shorter menu, the redaction editor on the whole window with panels you can

Faster review of AI suggestions

Filters, counts and keyboard shortcuts to accept or reject each suggestion. Whole requests analyzed in batches.

hide, light and dark themes, in English and French.

Nothing is accepted without your officer.

Stronger security

Longer passwords, account lockout after repeated failed sign-ins, sessions that end on their own, a complete audit trail and an emergency stop for the AI.

Better release packages

Each section sits beside its own box on review copies, pages read “Page 10 of 380”, and consultation copies keep the page numbers of the whole package.

ENTERPRISE PLATFORM

One platform. Every step of the access process.

Intake → Analysis → Review → Redaction → Approval → Release

From document to disclosure: case management, deadlines, correspondence, consultations, approvals, reports and a complete audit trail, with AI built in. AI does the work. The access professional makes the decision.
